28		

1 tions and communications. In a dynamic economy in which consumer trust is essen-
2 tial (and easily lost), businesses are increasingly bundling encryption and other forms
3 of data protection with their products. Privacy and security, therefore, are industry
4 best practices and essential competitive advantages. Any electronic platform that al-
5 lows two-way communication must think about privacy and security, and any plat-
6 form that seeks to allow anonymity (for any purpose) must do the same. Thus,
7 against this backdrop, companies have adopted a variety of digital security initiatives
8 to protect data. Encryption, at the fore here, has become an integral part of the U.S.
9 economy: It provides the transaction security that allows companies to sell globally
10 and provides security for much of the nation’s commerce, and ensures that our most
11 sensitive data stays private—protecting patient health information, financial data, and
12 every American who shops online. *See, e.g.*, Federal Communications Commission
13 (“FCC”), *Cyber Security Planning Guide*, at PDS-4 (“The two primary safeguards for
14 data are passwords and encryption.”). But there are many other means for securing
15 digital information in addition to encryption and the specific processes implicated by
16 the Government’s request for assistance here. Software companies design programs
17 that, *inter alia*, limit access to data stored or collected by software, or that purge data
18 automatically after a set period (perhaps most famous is Snapchat, whereby photos
19 and messages are automatically deleted shortly after receipt).

20 Such privacy and security protections are vital to the mobile economy. As the
21 United States Supreme Court has recognized, “modern cell phones . . . are now such
22 a pervasive and insistent part of daily life that the proverbial visitor from Mars might
23 conclude they were an important feature of human anatomy.” *Riley v. California*,
24 134 S. Ct. 2473, 2484 (2014). “Today, . . . it is no exaggeration to say that many of
25 the more than 90% of American adults who own a cell phone keep on their person a
26 digital record of nearly every aspect of their lives—from the mundane to the inti-
27 mate.” *Id.* at 2490. “Mobile application software on a cell phone, or ‘apps,’ offer a
28 range of tools for managing detailed information about all aspects of a person’s life.”

1 *Id.* Platform designers, telecom providers, and third-party software developers,
2 working together, have created the App Economy in less than a decade, and “[t]he
3 mantra of the smart phone era is that ‘there’s an app for that,’ indicating that there is
4 a program to fulfill every need.” Orin S. Kerr, *Foreword: Accounting for Technological*
5 *Change*, 36 Harv. J.L. & Pub. Pol’y 403, 405 (2013).

6 With mobile platforms and communications now ubiquitous, risks that private
7 data will be breached have multiplied. To start, “[m]obile devices are particularly
8 vulnerable to loss and theft because of their small size and portability. The most
9 common form of security breach is the theft of mobile devices.” Catherine Barrett,
10 *Healthcare Providers May Violate HIPAA by Using Mobile Devices to Communicate*
11 *with Patients*, 8 ABA Health eSource, no. 2 (Oct. 2011). “Millions of cell phones
12 and smartphones are lost or stolen every year[,]” and “approximately 22% of the total
13 number of mobile devices produced will be lost or stolen during their lifetime, and
14 over 50% of these will never be recovered.” Ernst & Young, *Bring Your Own De-*
15 *vice: Security and Risk Considerations for Your Mobile Device Program*, Insights on
16 Governance, Risk & Compliance 4 (Sept. 2013). And while the security of the de-
17 vices themselves is critical, best practices also require a variety of additional protec-
18 tions be implemented with respect to the device’s operating system, applications, and
19 other content on the device itself. These protections are critical whether the device is
20 locked or unlocked, because the data stored on mobile devices is regularly targeted
21 by social engineering attacks, malware, and other web and network-based attacks.
22 FCC, *Cyber Security Planning Guide*, at MD-1. As the Government Accountability
23 Office told Congress several years ago, “[t]hreats to the security of mobile devices
24 and the information they store and process have been increasing significantly.” U.S.
25 Gov’t Accountability Office (“GAO”), GAO-12-757, *Information Security: Better*
26 *Implementation of Controls for Mobile Devices Should Be Encouraged*, at “High-
27 lights” page (2012). Between July 2011 and May 2012 alone, the number of malware
28 attacks on mobile devices jumped 185%. *Id.*; *see id.* at 11–14 (“Attacks on Mobile

1 Devices Are Increasing”); *see also* Paul Ruggiero & Jon Foote, United States Com-
2 puter Emergency Readiness Team, *Cyber Threats to Mobile Phones* (2011).

3 In light of these risks, the public is demanding stronger and stronger privacy
4 and security protections. *See, e.g.*, Jessica Rich, Director, Bureau of Consumer Pro-
5 tection, Federal Trade Commission (“FTC”), *Beyond Cookies: Privacy Lessons for*
6 *Online Advertising*, AdExchanger Industry Preview 2015 (Jan. 21, 2015) (“consumer
7 awareness and demand for privacy continues to grow” and there is “even consumer
8 reluctance to engage fully in the marketplace as a result” of these concerns). In re-
9 sponse, companies have taken a variety of measures to protect privacy and security.
10 Software companies have been at the forefront, developing security tools that are sold
11 directly to consumers or other businesses. *See, e.g.*, Heidi Hoopes, *Apps to Easily*
12 *Encrypt Your Text Messaging and Mobile Calls*, Gizmag (Sept. 27, 2014); Brad
13 Chacos, *Here’s How to Best Secure Your Data Now That the NSA Can Crack Almost*
14 *Any Encryption*, PC World (Sept. 6, 2013).

15 The current federal regulatory framework not just tolerates but actively en-
16 courages that approach. *See In re Order Requiring Apple, Inc. to Assist in the Execu-*
17 *tion of a Search Warrant Issued by this Court*, No. 15-mc-1902, --- F. Supp. 3d ---,
18 2016 WL 783565, at *19 n.29 (E.D.N.Y. Feb. 29, 2016) (“Not only has Apple done
19 nothing wrong in marketing devices with such strong data security features, it has ex-
20 exercised a freedom that Congress explicitly deemed appropriate in balancing the needs
21 of law enforcement against the interests of private industry.”). The FTC, for example,
22 has repeatedly urged app developers to take privacy and security seriously. *See, e.g.*,
23 FTC, *What’s the Deal? An FTC Study on Mobile Shopping Apps* 6 n.16 (2014)
24 (hereinafter “FTC Study”) (“reiterat[ing] [the FTC’s] call for [app] companies to
25 practice ‘Privacy by Design’ and to offer consumers simplified choices over how
26 their data is handled”) (citing additional FTC guidance). Companies do so, and regu-
27
28

1 larly compete over the efficacy of the technologies they have developed.² Their in-
2 novations in this space benefit not just the public but also the federal government.
3 *See, e.g.,* Tomio Geron, *Something Ventured: Uncle Sam Is Staking Start-Ups*,
4 VentureWire (Mar. 12, 2008) (discussing the federal government’s funding of, and
5 purchases from, IronKey, which develops encryption and other data security prod-
6 ucts). As discussed below, the Government’s demands in this case would severely
7 compromise the ability of software companies to meet the public’s demands, as well
8 as the demands of other federal government agencies, for secure data storage and
9 communications.

10 **ARGUMENT**

11 The Government’s demands would impose an unprecedented and extraordi-
12 nary burden on numerous industry participants. If changes to the policy framework
13 governing the mobile economy’s vital technologies need to be made, such changes
14 should come from Congress—not by way of an ad hoc process based on a misappli-
15 cation of a 227-year-old law. As Magistrate Judge Orenstein of the U.S. District
16 Court for the Eastern District of New York held earlier this week in rejecting a simi-
17 lar attempt by the Government to use the All Writs Act, “the relief the government
18 seeks is unavailable because Congress has considered legislation that would achieve
19 the same result but has not adopted it.” *In re Order Requiring Apple, Inc. to Assist in*
20 *the Execution of a Search Warrant Issued by this Court*, 2016 WL 783565, at *1; *see*
21 *id.* at *17 (recognizing that the type of Government application for assistance here
22 “fails to satisfy the [All Writs Act’s] statutory requirements”). Moreover, in the
23

24 ² This is to be expected because of how consumers value privacy and security. *See*
25 Scott J. Savage & Donald M. Waldman, *The Value of Online Privacy* (Univ. of Colo.
26 at Boulder, Working Paper No. 13-02, 2013) (determining that “privacy permissions
27 are . . . important characteristics a consumer considers when purchasing a smartphone
28 app” and that “[t]he representative consumer is willing to make a one-time payment of
\$2.28 to conceal their online browser history, \$4.05 to conceal their list of contacts,
\$1.19 to conceal their location, \$1.75 to conceal their phone’s identification number,
and \$3.58 to conceal the contents of their text messages”).

1 course of rejecting the Government’s request there, the court recognized that the re-
2 quest was *less* burdensome than the one pending before this Court. *See id.* at *1 n.3
3 (the request there involved Apple’s iOS7, not “later versions” of Apple’s operating
4 system, which present “important differences . . . in terms of the difficulty of bypass-
5 ing passcode security”); *id.* at *10 n.14 (“more intrusive relief . . . is precisely what
6 the government seeks in the *California* action,” *i.e.*, the case pending here); *id.* at *22
7 (“[T]he government continues to seek orders compelling Apple’s assistance in by-
8 passing the passcode security of more recent models and operating systems, notwith-
9 standing the fact that such requests are more burdensome than the one pending
10 here.”).

11 **I. THE BURDEN THE GOVERNMENT SEEKS TO IMPOSE IS UN-**
12 **PRECEDENTED.**

13 The “assistance” that the Government has compelled through the All Writs Act
14 here is unprecedented and extraordinary. By the Government’s account, the All
15 Writs Act empowers the federal government to compel companies to write software
16 to assist law enforcement, simply because those companies “write[] software code as
17 part of [their] regular business.” Gov’t’s *Ex Parte* Application for Order Compelling
18 Apple Inc. to Assist Agents at 15 (C.D. Cal. Feb. 16, 2016) [ECF Docket Entry 18]
19 (hereinafter “*Ex Parte* Application”); *id.* (“the order in this case requires Apple to
20 provide modified software”). The Government contends that this power over a third
21 party, which has not engaged in any wrongful conduct, is incident to a “warrant au-
22 thORIZING the search” of property used by an accused criminal and the property own-
23 er’s “consent.” *Id.* at 1. The notion that the All Writs Act permits this remedy—
24 which more closely resembles a mandatory injunction imposed against a defendant
25 found liable for causing significant harm or the type of structural relief found in a
26 consent decree—is incredible. *See In re Order Requiring Apple, Inc. to Assist in the*
27 *Execution of a Search Warrant Issued by this Court*, 2016 WL 783565, at *20–24
28 (rejecting the Government’s request for All Writs Act relief, and explaining that the

1 assistance the Government attempted to compel has no parallel in and “is irreconcila-
2 ble with,” *id.* at *23, the line of cases upon which the Government also relies here).

3 Moreover, nothing in the Government’s argument limits this construction of
4 the All Writs Act to the device and operating system at issue here; to a particular type
5 of privacy measure used to protect the device, its operating system, its applications or
6 its data; to the type of software company (multi-national with extraordinary re-
7 sources) whose assistance is being conscripted; or to the type of crime (terrorism and
8 mass murder) that gave rise to the search warrant with which the third party is now
9 compelled to assist. Nor are any of the Government’s arguments logically capable of
10 doing so. *See generally id.* at *23–24. The interpretation of the All Writs Act that
11 would allow the Government to compel Apple to write software to avoid the security
12 measures currently in place on the locked phone in question would similarly allow
13 the Government to compel any software company of any size to rewrite, alter, or de-
14 stroy their software programs if that would assist the Government in an investigation.
15 *See id.* at *13 (“[T]he implications of the government’s position are so far-reaching—
16 both in terms of what it would allow today and what it implies about Congressional
17 intent in 1789—as to produce impermissibly absurd results.”) (citation omitted); *id.*
18 at *24 (“Nothing in the government’s arguments suggests *any principled limit* on
19 how far a court may go in requiring a person or company to violate the most deeply-
20 rooted values to provide assistance to the government the court deems necessary.”)
21 (emphasis added).

22 Because the number of players in the computer technology industry (and, more
23 specifically, the mobile economy, *see State of the App Economy, supra*, at 2–4, 8–10)
24 is large and increasing, and because many of those industry participants use proprie-
25 tary methods both to protect data privacy and “write[] software code,” *Ex Parte Ap-*
26 *plication* at 15, the Government’s ability to commandeer a third party to alter an op-
27 erating system or to write new software in the interest of law enforcement objectives
28 has enormous repercussions. The form of “assistance” the Government has con-

1 scripted Apple to provide here would require massive expenditures of time and re-
2 sources from *any* industry player, and it would be exceptionally onerous for the small
3 companies that constitute the majority of ACT’s members and that are the heart of
4 the mobile economy. The extent, if any, to which the thousands of participants in the
5 App Economy should be enlisted to aid the Government in criminal investigations in
6 such a manner was not resolved by Congress in 1789 when it passed the All Writs
7 Act, and the courts should allow Congress to address the issue now rather than fash-
8 ioning what would be in effect a common law solution to a significant matter of pub-
9 lic policy. *In re Order Requiring Apple, Inc. to Assist in the Execution of a Search*
10 *Warrant Issued by this Court*, 2016 WL 783565, at *27 (“It would betray our consti-
11 tutional heritage and our people’s claim to democratic governance for a judge to pre-
12 tend that our Founders already had that debate [relevant to such motions to compel
13 assistance], and ended it, in 1789.”).

14 **A. The All Writs Act Does Not Support The Type Of Burdensome As-**
15 **sistance Compelled Here.**

16 “The All Writs Act provides that federal courts ‘may issue all writs necessary
17 or appropriate in aid of their respective jurisdictions and agreeable to the usages and
18 principles of law.’” *In re Cty. of Orange*, 784 F.3d 520, 526 (9th Cir. 2015) (quoting
19 28 U.S.C. § 1651). The scope of the Act may “extend[], under appropriate circum-
20 stances, to persons who [are] not parties to the original action” and potentially “en-
21 compasses even those who have not taken any affirmative action to hinder justice.”
22 *United States v. New York Tel. Co.*, 434 U.S. 159, 174 (1977) (citation omitted). As
23 summarized by the Ninth Circuit, “[i]n *New York Telephone*, the Supreme Court held
24 that the All Writs Act empowered the district court to order a third party telephone
25 company to provide facilities it regularly used for its own purposes to assist the FBI
26 to conduct a search.” *Plum Creek Lumber Co. v. Hutton*, 608 F.2d 1283, 1289 (9th
27 Cir. 1979). Such an order, according to the Supreme Court, was “authorized by the
28 All Writs Act and was consistent with the intent of Congress.” *New York Tel. Co.*,

1 434 U.S. at 172. The Supreme Court, however, made clear that “the power of federal
2 courts to impose duties upon third parties is not without limits[,]” and that “unreason-
3 able burdens may not be imposed.” *Id.*

4 The All Writs Act, “read with the *New York Telephone* gloss, permits the dis-
5 trict court, in aid of a valid warrant, to order a third party to provide *nonburdensome*
6 technical assistance to law enforcement officers.” *Plum Creek*, 608 F.2d at 1289
7 (emphasis added). In that way, the All Writs Act can serve as an interstitial, gap-
8 filling tool. But it is also important to bear in mind what the All Writs Act does *not*
9 *do*. The statute “does not give the district court a roving commission to order a party
10 subject to an investigation to accept additional risks at the bidding of . . . inspectors.”
11 *Id.* “It does not authorize a court to order a party to bear risks not otherwise demand-
12 ed by law, or to aid the government in conducting a more efficient investigation,
13 when other forms are available.” *Id.* at 1289–90. It does not constitute “a grant of
14 plenary power to the federal courts.” *Id.* at 1289; *see In re Order Requiring Apple,*
15 *Inc. to Assist in the Execution of a Search Warrant Issued by this Court*, 2016 WL
16 783565, at *17–18, *20–24 (discussing *New York Telephone*).

17 The Government’s position here flaunts those principles. *See In re Order Re-*
18 *quiring Apple, Inc. to Assist in the Execution of a Search Warrant Issued by this*
19 *Court*, 2016 WL 783565, at *1, *5–17. The Government seeks a power that extends
20 far beyond any previously recognized under the All Writs Act. Notably, the Gov-
21 ernment cannot point to a *single* case under the All Writs Act (or otherwise), in which
22 a court compelled a third party to build software, let alone to restructure a business,
23 in order to assist in a criminal investigation. *See, e.g., Ex Parte Application* at 14–16.
24 There is a good reason for this: Such a power is utterly unprecedented, and it is all
25 the more extraordinary here where the Government invokes this power against a third
26 party—a third party who, moreover, has acted *within* the carefully-constructed priva-
27
28

1 cy frameworks established by Congress.³

2 “The growth of electronic communications has stimulated Congress to enact
3 statutes that provide both access to information heretofore unavailable for law en-
4 forcement purposes and, at the same time, protect users of such communication ser-
5 vices from intrusion that Congress deems unwarranted.” *In re Application of U.S. for*
6 *an Order Directing a Provider of Elec. Commc’n Serv. to Disclose Records to the*
7 *Gov’t*, 620 F.3d 304, 306 (3d Cir. 2010); *see generally In re Order Requiring Apple,*
8 *Inc. to Assist in the Execution of a Search Warrant Issued by this Court*, 2016 WL
9 783565, at *5–7, *8–17 (discussing existing legislation and legislation Congress has
10 chosen not to enact); Apple’s Mot. at 8–10, 16–18 (discussing statutes relevant
11 here).⁴ This framework struck an important balance: For example, “[f]inding that
12 ‘new and emerging telecommunications technologies pose problems for law en-
13 forcement,’” Congress sought “to preserve the government’s ability, pursuant to court
14 order or other lawful authorization, to intercept communications involving advanced
15 technologies . . . while protecting the privacy of communications and *without imped-*
16 *ing the introduction of new technologies, features, and services[.]” U.S. Telecom*
17 *Ass’n v. F.C.C.*, 227 F.3d 450, 454 (D.C. Cir. 2000) (emphasis added) (citation omit-

18
19 ³ Notwithstanding the Government’s statement that “providers of electronic commu-
20 nications services and remote computing services are sometimes required to write
21 code in order to gather information in response to subpoenas or other process[.]” *Ex*
22 *Parte Application* at 15, the Government cannot point to a single instance where the
23 *All Writs Act* has imposed the requirement. That Congress may have *legislated* such
24 requirements in other contexts does not strengthen the Government’s case here, *see*
25 *generally In re Order Requiring Apple, Inc. to Assist in the Execution of a Search*
26 *Warrant Issued by this Court*, 2016 WL 783565, at *9–12; it instead shows why the
27 Government’s position must be rejected.

24 ⁴ As the Third Circuit has summarized, “[t]he Stored Communications Act . . . , was
25 enacted in 1986 as Title II of the Electronic Communications Privacy Act of 1986 . . . ,
26 Pub.L. No. 99-508, 100 Stat. 1848 (1986) (codified as amended at 18 U.S.C. §§ 2701–
27 2711 (2010)), which amended the Omnibus Crime Control and Safe Streets Act of
28 1968, . . . Pub.L. No. 90-351, 82 Stat. 197 (1968). In 1994, Congress enacted the
Communications Assistance for Law Enforcement Act [CALEA], Pub.L. No. 103-414,
108 Stat. 4279, 4292 (1994) (codified in relevant part at 18 U.S.C. § 2703 (2010)), in
part to amend the [Stored Communications Act].” *In re Application*, 620 F.3d at 306
(footnote omitted).

1 ted).

2 But the Government now seeks to do an end-run around the existing frame-
3 work—and stands to demolish the significant reliance interests associated with it—
4 and, instead, arrogate to itself new powers that impose extraordinary burdens. “The
5 obligation of private citizens to assist law enforcement, even if they are compensated
6 for the immediate costs of doing so, has not extended to circumstances in which there
7 is a complete disruption of a service they offer to a customer as part of their busi-
8 ness[.]” *In re U.S. for an Order Authorizing Roving Interception of Oral Commc’ns*,
9 349 F.3d 1132, 1145 (9th Cir. 2003). App developers have taken privacy and securi-
10 ty seriously, and built entire business models based on delivering information securi-
11 ty to their customers. Now, the Government (by which we mean specifically the law
12 enforcement arm of the Executive, not the federal government more broadly) wants
13 to weaken data protection. And weaker data protection is bad for business, bad for
14 innovation, and ultimately bad for consumers. (By contrast, it would be a boon to
15 hackers, cyberterrorists and unfriendly or rogue governments.) Moreover, when
16 companies have been told by legislators, policy-setting agencies and consumers that
17 they should aspire to create the strongest protections possible, and then certain actors
18 in the Executive Branch seek to undo those protections after the fact—without prior
19 notice, let alone comment and debate—it imposes unanticipated harms on developers
20 while disrupting the marketplace, discouraging innovation, and failing to account for
21 the full range of relevant economic and consumer interests. *In re Order Requiring*
22 *Apple, Inc. to Assist in the Execution of a Search Warrant Issued by this Court*, 2016
23 WL 783565, at *26–27.

24 Indeed, the Government’s distortion and misapplication of *New York Tele-*
25 *phone* makes Justice Stevens’s dissent in that case appear prophetic. *See New York*
26 *Tel. Co.*, 434 U.S. at 178–91 (Stevens, J., dissenting in part). The dissent suggested
27 that while the relatively mild burden imposed in *New York Telephone* might not be
28 “particularly offensive,” the order at issue in that case nevertheless was “deeply trou-

1 bling as a portent of . . . powers that future courts may find lurking in the arcane lan-
2 guage of . . . the All Writs Act.” *Id.* Justice Stevens might well have been speaking
3 of the Government’s position in this case.⁵

4 **B. The Government Misapprehends The Extraordinary Burdens, Part-**
5 **icularly On Small Companies, That Compelled Assistance Of This**
6 **Type Imposes.**

7 The Government’s arguments against the existence of an unreasonable burden
8 not only are unsupported by any case law, but they also misconstrue the burdens at
9 issue. At bottom, the Government’s position rests on fallacies. *See Ex Parte Appli-*
10 *cation* at 15. That one can build software that fulfills a particular function in the first
11 instance does not mean that one can undo it without creating significant harms. The
12 risks associated with such revisions are especially severe where, as here, the modifi-
13 cations need to occur at the operating system level of the code, because the operating
14 system affects all applications that run on and data stored on the device and therefore
15 can create cascading problems throughout. *See, e.g., Apple, Unauthorized Modifica-*
16 *tion of iOS Can Cause Security Vulnerabilities, Instability, Shortened Battery Life,*
17 *and Other Issues* (Sept. 22, 2015). Indeed, the Government’s position borders on the
18 absurd in the context of software development. Not only are the burdens imposed ex-
19 traordinary (*i.e.*, diverting resources from company’s actual business to being a tool

20
21 ⁵ As Justice Stevens observed, the type of power the Government seeks here *might*
22 find a certain historical parallel in the common law “writ of assistance.” *New York Tel.*
23 *Co.*, 434 U.S. at 180. “The writ of assistance . . . took its name from its command that
24 all peace officers and any other persons who were present ‘be assisting’ in the perfor-
25 mance of the search.” Thomas Y. Davies, *Recovering the Original Fourth Amend-*
26 *ment*, 98 Mich. L. Rev. 547, 561 n.18 (1999). Such writs “commanded ‘all officers
27 and subjects of the Crown to assist in their execution,’ and were not returnable after
28 execution, but rather served as continuous authority during the lifetime of the reigning
sovereign.” *New York Tel. Co.*, 434 U.S. at 180 n.3 (quoting N. Lasson, *The History*
and Development of the Fourth Amendment to the United States Constitution 53–54
(1937)). But “[t]he use of that writ by the judges appointed by King George III was
one British practice that the Revolution was specifically intended to terminate.” *Id.* at
190; *see Brower v. Cty. of Inyo*, 489 U.S. 593, 596 (1989) (identifying “writs of assis-
tance” as “the principal grievance against which the Fourth Amendment was di-
rected”).

1 of government),⁶ but the goals the Government seeks to achieve are far from assured.
2 As any computer user knows, many software patches, which are far more basic than
3 what the Government seeks to compel here, fail to fix problems, make other things
4 worse, or simply necessitate more patches.

5 Additionally, although Apple faces extraordinary burdens here, *see* Declaration
6 of Erik Neuenschwander in Support of Apple’s Mot. (Feb. 25, 2016), the burdens
7 likely would be far weightier for a smaller or startup software company conscripted
8 to develop software to assist a Government investigation. Put simply, the small busi-
9 nesses who comprise the majority of ACT’s 5,000-plus members do not have the per-
10 sonnel or the resources to effectuate the type of new software development that the
11 Government compelled here. *See id.* ¶¶ 3, 21–22 (testifying that “between six and
12 ten Apple engineers and employees” would be required). The logic set forth by the
13 Government in obtaining relief under the All Writs Act, however, lacks any princi-
14 pled stopping point: *Any* app developer might generate and apply privacy and securi-
15 ty protections that neither the developer nor the Government could crack.⁷

16 Moreover, the burdens associated with the sort of assistance compelled here go
17 well beyond writing software. For one thing, not only must a company *write* the new
18 software, its personnel—once conscripted as quasi-forensic scientists developing and
19 testing methods to support a prosecution—likely will be haled into courts around the
20 country to *testify* about it as well. *See generally Melendez-Diaz v. Massachusetts*,
21 557 U.S. 305, 310 (2009) (forensic reports available for use at trial are “testimonial

22
23 ⁶ *See In re Order Requiring Apple, Inc. to Assist in the Execution of a Search Warrant*
24 *Issued by this Court*, 2016 WL 783565, at *20 (rejecting Government’s argument that
25 assistance it sought to compel would not impose unreasonable burdens, stating “[t]he
26 salient points that the Court highlighted as the basis for finding a lack of unreasonable
27 burdens in *N.Y. Tel. Co.* are virtually all absent here,” notwithstanding as noted *supra*
28 at 6, the burdens there were less than in this case).

26 ⁷ The app industry has been marked by some of the most innovative content being de-
27 veloped by small startups, which has directly led to larger industry players purchasing
28 those small companies or their technologies. *See, e.g., Ivana Kottasova, Zuckerberg*
Goes Shopping: Facebook’s Top 10 Purchases, CNN (Mar. 26, 2014).

1 statements” and a certifying analyst is a “‘witness[]’ for purposes of the Sixth
2 Amendment”).

3 Irrespective of whether the conscripted employees trigger a defendant’s Con-
4 frontation Clause protections, a necessary incident to the compelled assistance is that
5 a company’s proprietary software used to incriminate the criminal defendant will be-
6 come discoverable by the criminal defendant and by his or her experts. As a result,
7 those experts may attempt to attack the reliability of the recovered data and the meth-
8 ods used to obtain it. This, in turn, likely will be subject to further court proceedings
9 as the experts’ data-recovery methodology is questioned and passed on by the trial
10 court in its gate-keeping role. Even assuming that the “strong presumption in favor
11 of access to court records,” *Foltz v. State Farm Mut. Auto. Ins. Co.*, 331 F.3d 1122,
12 1135 (9th Cir. 2003), is overcome and that robust protective orders remain in place
13 throughout this process, some disclosure of the software company’s proprietary
14 methods would be inherent to this process. Consistent with this, companies, consum-
15 ers and the United States Government itself reasonably should fear that, once the pri-
16 vacy protections are compromised for one purpose, they will more readily be com-
17 promised by hackers, criminals, and foreign governments from which they have at-
18 tempted to shield such information.

19 Although one cannot predict with absolute certainty the full range of second-
20 order effects resulting from the Government’s use of the All Writs Act in this manner,
21 there is no question that even the mere prospect of these extraordinary burdens will
22 chill innovation and deter companies and individuals from entering this important
23 space.⁸ Technology development will be compromised, perhaps radically so, in an

24
25 ⁸ Moreover, the Government’s position may have adverse consequences even with re-
26 spect to those actors that choose to remain in the privacy and security marketplace.
27 Specifically, because the magnitude of the burdens imposed often will vary in propor-
28 tion to the security of the measures in place, *see In re Order Requiring Apple, Inc. to*
Assist in the Execution of a Search Warrant Issued by this Court, 2016 WL 783565, at
*22, the Government’s proposed use of the All Writs Act would perversely incentiv-
ize use of measures that provide *less* privacy and security protections for businesses

(Footnote continued)

1 area of exceptional importance to consumers and the broader economy — despite that
2 the federal government’s other arms, as noted, have encouraged and in some cases
3 required companies to focus on and strengthen data privacy and security. The un-
4 precedented order the Government seeks is not authorized by the All Writs Act; it
5 would impose an extraordinary and unreasonable burden both on Apple and on thou-
6 sands of other entities across the App Economy.

7 **C. These Burdens Cannot Be Cabined To This Particular Case.**

8 Finally, it is important to understand how broadly applicable the powers sought
9 by the Government would be, in practice. Notwithstanding the Government’s at-
10 tempts to emphasize the specific facts of this case, *see Ex Parte* Application at 1–4,
11 16–17, there is nothing in the Government’s argument that provides a principled
12 stopping point that would limit the assistance sought to cases such as this one. *In re*
13 *Order Requiring Apple, Inc. to Assist in the Execution of a Search Warrant Issued by*
14 *this Court*, 2016 WL 783565, at *13, *22–24. The Government’s argument regard-
15 ing the lawfulness of this Court’s order does not, for example, carefully weigh the
16 specifics of its interest in investigating and combating terrorism against the specifics
17 of the burden imposed.⁹ Rather, it focuses only on the supposed lack of a burden on
18 Apple, which is based on reasoning that, as explained, would apply to any company
19 that writes software. The Government does this, presumably, because it does not ac-
20 tually *want* an order that would apply “‘Just this once.’” Apple’s Mot. at 3.

21 For example, as recently disclosed in the Eastern District of New York case
22 discussed throughout this brief, the federal government has sought similar orders in-

23 _____
24 and consumers. This would undermine the government’s broader aims of fostering
increased security. *See, e.g.*, FTC Study, *supra* at 4.

25 ⁹ The Government’s presumption is that where a company’s technology is implicated
26 in a government investigation, *see Ex Parte* Application at 13–14, and where a com-
27 pany’s technology provides some barrier to fully effectuating a warrant, *id.* at 16–
17—conditions that often will be met where data privacy is at issue—a company can
28 be compelled to write software relevant to the same technological subject matter, *id.* at
14–16.

1 volving twelve other devices manufactured by Apple alone. *See In re Order Requir-*
2 *ing Apple, Inc. to Assist in the Execution of a Search Warrant Issued by the Court,*
3 2016 WL 783565, at *22; *see also* Julia Angwin, *What’s Really at Stake in the Apple*
4 *Encryption Debate*, ProPublica (Feb. 24, 2016). Moreover, as Manhattan District At-
5 torney Cyrus Vance has stated, this issue implicates not just federal investigations,
6 but “virtually all criminal investigations, the overwhelming majority of which are
7 handled by state and local law enforcement.” Cyrus R. Vance Jr., *No Smartphone*
8 *Lies Beyond the Reach of a Judicial Search Warrant*, N.Y. Times (Feb. 18, 2016).
9 Vance’s office alone “has 175 iPhones it can’t open.” Alyssa Newcomb, *New York*
10 *DA Says He Can’t Access 175 iPhones From Criminal Cases Due to Encryption*,
11 ABC News (Feb. 18, 2016).

12 The Government’s position converts every criminal investigation into an op-
13 portunity to enlist the aid of software companies. But the All Writs Act is a gap-
14 filling tool, not a license for the federal courts to regulate a critical function of a rap-
15 idly growing \$120 billion industry through the common law. The kinds of trade-offs
16 between national security and data security that the Government asks this Court to
17 make require the gathering of information and the reconciliation of competing na-
18 tional policy goals that Congress should address. *In re Order Requiring Apple, Inc.*
19 *to Assist in the Execution of a Search Warrant Issued by the Court*, 2016 WL
20 783565, at *8–17, *26–27.

21 **II. IF THE GOVERNMENT WANTS THESE NEW TOOLS, IT SHOULD**
22 **SEEK NEW LEGISLATION, NOT USE THE ALL WRITS ACT**

23 There is no doubt that tensions and competing interests exist between law en-
24 forcement’s interests and the broader interest of ensuring data privacy. *In re Order*
25 *Requiring Apple, Inc. to Assist in the Execution of a Search Warrant Issued by the*
26 *Court*, 2016 WL 783565, at *26. To address the sensitive balancing of these consid-
27 erations, however, the answer is not to contort the All Writs Act and *New York Tele-*
28 *phone* beyond recognition. If a change needs to be made to the manner in which the

1 interests at issue here are weighed, it should be made by Congress. “The All Writs
2 Act is a residual source of authority to issue writs that are not otherwise covered by
3 statute. Where a statute specifically addresses the particular issue at hand, it is that
4 authority, and not the All Writs Act, that is controlling.” *Pennsylvania Bureau of*
5 *Correction v. U.S. Marshals Serv.*, 474 U.S. 34, 43 (1985). The Act, in other words,
6 is a narrow tool designed to fill in statutory gaps. Although it “empowers federal
7 courts to fashion extraordinary remedies when the need arises, it does not authorize
8 them to issue ad hoc writs whenever compliance with statutory procedures appears
9 inconvenient or less appropriate.” *Id.*; see *In re Order Requiring Apple, Inc. to Assist*
10 *in the Execution of a Search Warrant Issued by this Court*, 2016 WL 783565, at *5–
11 17; Apple’s Mot. at 14–19.

12 “The All Writs Act is not a grant of plenary power to the federal courts,” nor is
13 it a font of “wide-ranging inherent powers” pursuant to which a court may “impose a
14 duty on a private party when Congress has failed to impose one.” *Plum Creek*, 608
15 F.2d at 1289–90. “To so rule would be to usurp the legislative function and to im-
16 properly extend the limited federal court jurisdiction.” *Id.*

17 The Government invites this Court to conclude that it somehow would be
18 “consistent with the intent of Congress,” *New York Tel. Co.*, 434 U.S. at 172, for the
19 All Writs Act to give courts and prosecutors the power to effect cataclysmic change
20 across a \$120 billion industry, disrupting many settled expectations and threatening
21 critical consumer privacy interests in the process. But Congress “does not alter the
22 fundamental details of a regulatory scheme in vague terms or ancillary provisions—it
23 does not, one might say, hide elephants in mouseholes.” *Whitman v. Am. Trucking*
24 *Assns.*, 531 U.S. 457, 468 (2001). Still less should such a change be based on the
25 mere *possibility* that Congress may have “failed to consider” the type of compelled
26 action sought here. *In re Order Requiring Apple, Inc. to Assist in the Execution of a*
27 *Search Warrant Issued by this Court*, No. 1:15-mc-1902, 2015 WL 5920207, at *1
28 (E.D.N.Y. Oct. 9, 2015). This is particularly so when Congress has legislated within

1 this very field and chose not to go further. *See* discussion *supra* at I.A; *In re Order*
2 *Requiring Apple, Inc. to Assist in the Execution of a Search Warrant Issued by this*
3 *Court*, 2016 WL 783565, at *19 n.29 (“CALEA provides that law enforcement agen-
4 cies cannot do precisely what the government suggests here: dictate to a private com-
5 pany in the business of manufacturing smartphones the extent to which it may install
6 data security features on such devices.”); *id.* at *10 n.13; Apple’s Mot. at 8–10, 16–
7 18.

8 If it wished to do so, Congress could legislate against the forms of information
9 security that the Government is seeking to bypass. *See, e.g., In re Order Requiring*
10 *Apple, Inc. to Assist in the Execution of a Search Warrant Issued by this Court*, 2016
11 WL 783565, at *12.¹⁰ The issue clearly has not escaped Congress’s attention. Just
12 yesterday — on March 1, 2016 — the House Judiciary Committee held a hearing enti-
13 tled *The Encryption Tightrope: Balancing Americans’ Security and Privacy*. H.
14 Comm. on the Judiciary, 114th Cong. (2016). Here, the “tightrope” should be Con-
15 gress’s to walk, not this Court’s. If the Government needs new law-enforcement
16 tools, and if those needs outweigh Americans’ vital privacy and security interests,
17 then that decision should be debated and properly addressed to Congress, not to this
18 Court: “Congress has the prerogative to determine the exact right response —
19 choosing the policy fix, among many conceivable ones, that will optimally serve the
20 public interest.” *Kimble v. Marvel Entm’t, LLC*, 135 S. Ct. 2401, 2414 (2015). With
21 new legislation, companies could assess the risks and burdens *ex ante*, and they could
22 ensure that their voices are heard, and that *all* the relevant factors are considered. *In*
23 *re Order Requiring Apple, Inc. to Assist in the Execution of a Search Warrant Issued*

24 ¹⁰ Of course, it is not clear whether such an action would have the support of the
25 American people. *See, e.g.,* Jim Finkle, *Solid Support for Apple in iPhone Encryption*
26 *Fight: Poll*, Reuters (Feb. 24, 2016) (“Forty-six percent of respondents said they
27 agreed with Apple’s position, 35 percent said they disagreed and 20 percent said they
28 did not know, according to poll results released on Wednesday. Other questions in the
poll showed that a majority of Americans do not want the government to have access
to their phone and Internet communications, even if it is done in the name of stopping
terror attacks.”).

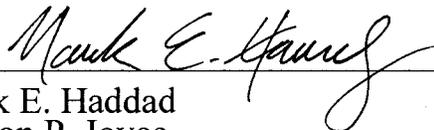

1 *by the Court*, 2016 WL 783565, at *26–27. The All Writs Act should not be used to
2 effect dramatic change that fails to account for the full range of relevant interests, dis-
3 rupts settled expectations, and imposes considerable harms on one of the country’s
4 most important economic engines.

5 **CONCLUSION**

6 For the foregoing reasons, *amicus curiae* ACT urges the Court to grant Apple’s
7 Motion to Vacate the Order Compelling Apple Inc. to Assist Agents in Search.

8 Dated: March 2, 2016
